ABOUT US

Our company is shaping its future by setting new trends by incorporating lighting in furniture elements and modern designed fixtures, which redefine contemporary art and elegance.

As pioneers in the development and production of a specific interesting lighting furniture system and all other shop elements, we can proudly say that the result is more than successful and satisfactory, just by the fact of many realized projects of complete interiors with luminous metal accessories in sales facilities at home and abroad.

SKYLINE

01

SKYLINE is a modern furniture lighting system, inspired by the phenomenon of light and reflection, providing intimate lighting of the furniture elements, which is perfect for a sophisticated environment.

Inspired by a minimalism in modern architectural trends, its elegant straight lines make a magnificent creation and exclusive design, a top product for retail spaces, as well as offices and luxurious living rooms.

SKYLINE

SKYLINE illuminated shelves and light base holders, as basic elements of furniture and lighting, can be moved to different positions vertically at the request of the user (they are not fixed), without additional el. cabling or moving existing elements, which is usually the case with the similar products on the market with far below our quality and LED lighting.
